DID YOU KNOW?

Biodynamic and organic farming both take place without chemicals, but biodynamic farming takes it a step further, incorporating ideas about a vineyard as an ecosystem, and accounting for things such as astrological influences and lunar cycles.

Biodynamics is a holistic, ecological, and ethical approach to farming, gardening, food, and nutrition, it has continued to develop and evolve since the 1920s through the collaboration of many farmers and researchers. Around the world, biodynamics is alive in thousands of thriving gardens, farms, vineyards, ranches, and orchards. The principles and practices of biodynamics can be applied anywhere food is grown, with thoughtful adaptation to scale, landscape, climate, and culture.
